Title:Combating Structural Racialization in the Agriculture Industry: A Case Study of Hmong Social Capital and Collective Entrepreneurship in the Twin Cities, MN Region

Throughout the United States, the agriculture industry has witnessed a demographic shift in its farming population- becoming older, more white, and dominated by men. It, therefore, is imperative that we seek to understand the causes and implications of this trend, especially for populations that may be excluded from market entry in this industry. Drawing on the literatures of ethnic enclaves, social networks, social capital, collective action, and collective entrepreneurship, this research project conducts a case study of the impact of structural racialization in the U.S. agriculture industry on the entrepreneurial opportunities facing the Hmong community in the Twin Cities, Minnesota region. It finds socially disadvantaged farmers, like the Hmong growers of the Twin Cities, face significant structural challenges in engaging in agricultural production on a small-scale. Additionally, this research argues the presence of an entrepreneurial organization working in pursuit of collective action and cooperative behavior is essential to combating the industry’s structural challenges and promoting the success of the individual entrepreneurs of color who operate within the mainstream economy.
